

# Download Nikon 28mm Manual Focus Lens

This is Nikon's sharpest manual-focus wide angle lens. Nikon let their designers go wild on this one. Instead of a simple 5 element design that every other 28mm f/2.8 lens uses, including the original AF version, this lens has EIGHT elements in EIGHT groups. This Nikon Nikkor lens is quality built and designed to last a lifetime. As a manual camera lens, this one features a smoothly operating rubberized focus ring that is also exceptionally well damped (fluid resistance). The 28mm Ai-S not only takes great landscapes, but you can reverse it (using the Nikon Nikon BR-2A Reversing Ring) and take macro shots 2.8x closer than with a standard macro lens. Only the Nikkor all-manual lenses (manual aperture) give the user control of the f/stop while in the reversed position. In 1959, with the introduction of the Nikon F and the F mount, Nikon introduces a line of retro-focal 28mm lenses. In the manual focus era that followed, this line was expanded to include lenses of three speeds, plus two shift capable, Perspective Correction versions.
