The acrosome is a structure that forms a cap over most of the nucleus of the sperm cell. The main job of the acrosome is to penetrate the outer layers of the ovum so that the sperm can get inside ...Once the cells have divided and created a multicellular structure, it is now called a gametophyte. We can see on our diagram that the gametophyte contains many of the same cells that are all haploid. Study Prentice Hall Biology: Student Edition discussion and chapter questions and find Prentice Hall Biology: Student Edition study guide questions and answers. Bloom's Taxonomy Level: Standard: Supporting Skills (Analysis) 9-12.L.1.1. Students are able to relate cellular functions and processes to specialized structures within cells.
